INTRODUCTION

A diagram is a visual way of representing a process, the way something happens or the way to achieve it.

The following is the flowchart of my current job as a receptionist where I show the basic functions in front desk job.

OBJECTIVE

To show through the tool a step by step of how the receptionist job is performed.

CONCLUSION

In conclusion, flowcharts are an invaluable tool for any software developer. By providing a visual and structured representation of processes, they facilitate the understanding, design and implementation of solutions. In addition, flowcharts encourage effective communication between members of a development team, which reduces the possibility of errors and improves the quality of the final software.

The flowchart this time is not related to the tech industry since I work in tourism, this time the application is the same only for a different economic sector.
